Designed for Durability**

CERAMIC

The solar tank is evenly coated with specially formulated Ceramic, which melts and spreads across the surface with uniform thickness. With this technology, you will get a clean and hygienic water storage system. Also, the marine line that is settled steadily on the tank does not melt with any further heating.

Here is why you should use Ceramic - Marine Line

- Uniform thickness of marine line ensures the water remains hot for a long duration.
- It is environmentally friendly, safe, and suitable for all types of water.
- It prevents the accumulation of chemicals, salts, and impurities on the surface of the water tank.
- The water you use from a marine line-coated tank is safe for your skin and hair.
- It provides a 10-year warranty with an uninterrupted supply of clean and hygienic hot water.
- Marine line ensures the tank stays free from leakage.

Two Sides Inner & Outer Marine Line Protect Your Tank From Being Rusty and Corroded

Gold Standard Tube Which gives Maximum Hot Water

Suitable for All types of Water

Best Service support with Well Experienced Technicians

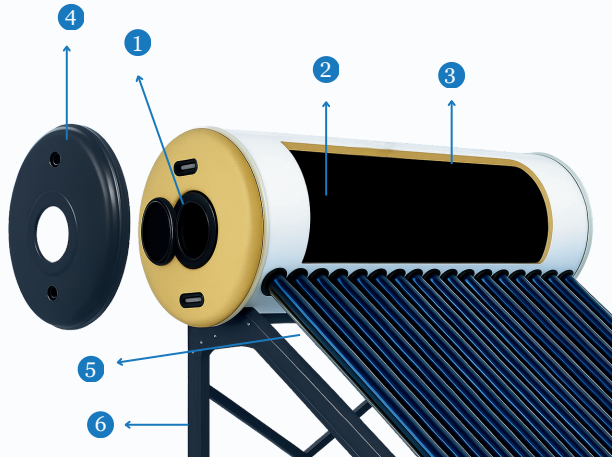

Lakhs of Satisfied Customers

Largest Dealer Network all over India

1. Openable doors for cleaning the tank from being rusty and corroded
2. Two Sides Inner & Outer Marine line protect
3. High-Pressure High Density PUF insulation
4. Capsule Dish-end-shaped Tank with stands greater pressure
5. Gold standard tube which gives maximum Hot water
6. Special Profile Rolled Section Stand provides stability and strength to system
